

Your digital Backbone.

The Backbone: Building out the digital backbone once and for all

Key Recommendations

- **Pass the Saskatchewan Connected Care and Patient Data Rights Act.** Introduce a modern provincial legislative framework that mirrors federal *Bill S-5*, legally establishing a clear, enforceable right for Saskatchewan patients to timely, secure and no-cost electronic access to their complete health information.
- **Expand MySaskHealthRecord into a true one-stop shop**, with a long-term goal of navigation and triage capability that is integrated directly with a modernized HealthLine 811 so a resident can move from symptom to service in one place; two-way secure messaging within your own care team, not just static records; genuine appointment and lab booking, not just the reminders the tool already offers; and access to full clinical visit notes, not just the fact that a visit occurred.
- **Establish the eHealth Primary Care Integration Taskforce.** Launch a dedicated, clinician-led taskforce within eHealth Saskatchewan with a mandate to eliminate fax machines from all clinics within a set timeline. Provide support to equip primary care providers with modern, fully interoperable Electronic Medical Record (EMR) software that seamlessly connects to the provincial circle of care.
- **Legislate a public accountability gate — the direct lesson of the 2014 EHR finding.** Write into the Act itself that no major funding tranche for the MySaskHealthRecord expansion can be released without an independent, publicly published milestone review confirming measurable progress against a preset benchmark. This is the specific, named answer to the *2012–2014 eHealth Saskatchewan finding*, where more than \$500 million was spent with insufficient public accounting for progress along the way. Pairing this recommendation with the broader platform's own "Anti-AIMS" financial accountability clause turns Saskatchewan's two biggest Sask Party digital-government memories — one payroll, one health records — into the reason to trust this one.
